

Your production code

Open source dependency

Professional support for your Java environment

Today, modern software is made up of more than 70% open-source components. Starting in 2027, manufacturers will be responsible for 100% of their software under the Cyber Resilience Act (CRA). This also includes all of their OSS dependencies. As part of our Support & Care services, we provide targeted maintenance for the following business-critical open-source core components of the Java ecosystem:

JUnit is one of the most widely used open-source components in the Java ecosystem, with over 1 billion downloads per month and a market share of approximately 85%. JUnit serves as the foundation for modern quality assurance.

Apache Log4j is one of the most widely used logging frameworks in the Java ecosystem. According to recent surveys, around 76% of all Java applications use Log4j for logging, more than any other logging tool.

Apache Maven is one of the most widely used tools in the Java ecosystem. Over 75% of all Java projects rely on Maven for build and project management. With approximately 2 billion downloads annually, it is a fundamental part of modern software development.

Apache Commons is one of the core utility library collections in the Java ecosystem and is a component of countless applications worldwide. Around 49% of Java developers actively use Apache Commons.

Eclipse Temurin is one of the leading OpenJDK distributions worldwide and serves as the runtime foundation for a wide range of Java applications across companies of all sizes. With over 500,000 downloads per day, it impressively highlights its global reach.

These components form the basis for your

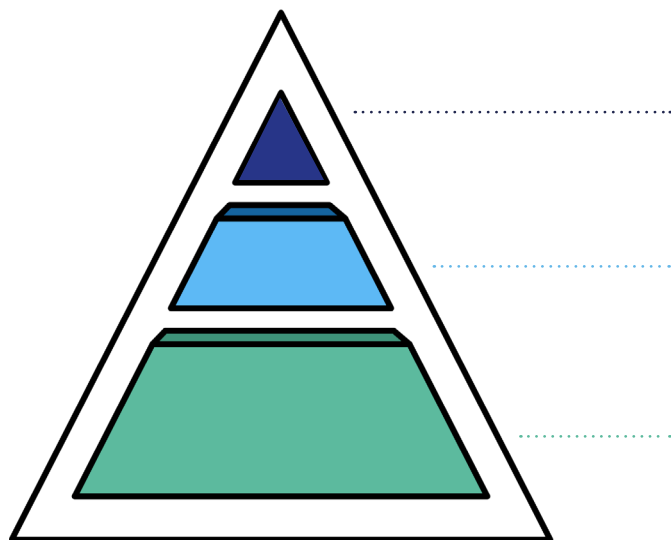

- build pipeline
- testing strategy
- logging infrastructure
- standard libraries
- Java runtime

In other words:

The end-to-end technical chain of trust for your Java applications.

How Support & Care makes an impact

In practice, Java applications can be effectively organized into three vertical layers:

Application-Specific Code

This is where your custom business and domain logic reside: all the features that make your product unique.

Framework & Application Platforms

This includes established frameworks and server platforms such as Spring Boot, Quarkus, and Jakarta EE.

Core Components

This is the fundamental level of your software architecture: runtime environment, test framework, build, and dependency management.

The base components of an application provide reusable infrastructure functionality but also carry a significant share of technical risks, including security vulnerabilities, transitive dependencies, and compliance responsibilities. Support & Care addresses this directly by continuously managing, monitoring, and proactively maintaining these key

components. This ensures security, stability, and regulatory protection at the lowest level of your application. By managing your applications' base components with Support & Care, you reduce risks, enhance supply chain security, and create a stable foundation for all layers above.

Support & Care as a CRA component

We act as an open-source steward with direct involvement in developing best practices for regulatory compliance.

Through our role as a founding member of the Eclipse Foundation's Open Regulatory Compliance Working Group (ORC WG), we collaborate with leading open-source foundations, major tech companies, and EU representatives on concrete specifications, recommendations, and practical guides for implementing the requirements of the Cyber Resilience Act (CRA).

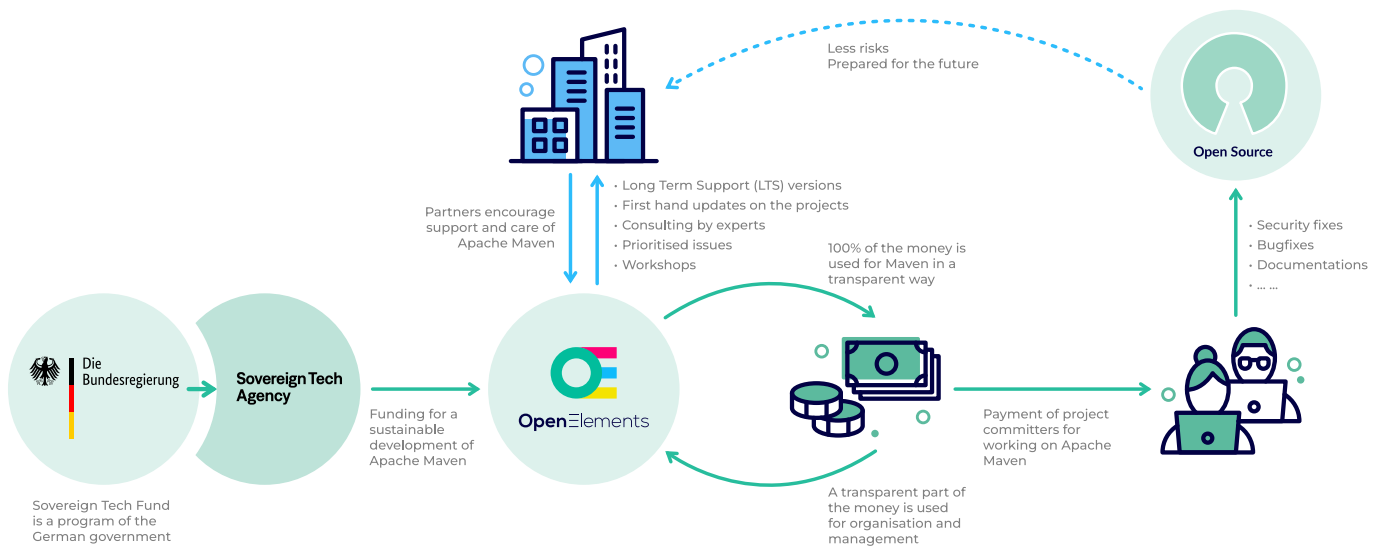

Support & Care helps you to:

- Significantly reduce patching times
- Systematically monitor vulnerabilities
- Make updates available in a predictable way
- Ensure documentation & transparency
- Guarantee long-term maintainability

And beyond that: we will support you in the future with CRA-compliant certifications for managed projects — based on the shared best practices being developed in the ORC WG.

More than support

Support & Care relies on a transparent cost-share model with strategic funding. This means you share the ongoing maintenance and improvement costs for the supported opensource components with us—not in an opaque or “quiet” way, but openly, traceably, and measurably. A central aspect of this model is that funds flow directly to the project maintainers. We provide long-term support to those who actually maintain the code, provide security updates, and develop new features. Instead of adding superficial layers of support, we invest in the vitality of the project’s core. Your requirements and priorities are actively integrated into the roadmaps of the supported projects, ensuring that further developments directly reflect real, business-relevant

needs. In addition, we proactively keep you up to date at all times, for example, regarding:

In addition, we proactively keep you up to date at all times, for example, regarding:

- Security alerts and new patches
- Planned API or major version changes
- Recommendations for version updates or dependency cleanups
- Trends and risks in the OSS ecosystem

This reduces production risks and enables vulnerabilities to be identified and resolved as quickly as possible.

What We Offer

Long Term Support (LTS)

Documentation & Transparency

Regular Webinars & Status Updates

Security Patches & Bug Fixes

Workshop & Advisory Service

Custom Builds & Tooling

Flexible service models for sustainable security

Select the Support & Care model that matches your requirements for availability, compliance, and SLA.

Basic Subscription

4 hours of support per month included¹

Response time:
1 business day²

Support requests via helpdesk in German and English³

10% discount on every additional support hour

Quarterly webinar directly with the experts^{4,5}

Monthly newsletter

Standard Subscription

8 hours of support per month included¹

Response time:
1 business day²

Support requests via helpdesk in German and English³

15% discount on every additional support hour

Quarterly webinar directly with the experts^{4,5}

Monthly newsletter

10% training discount

Individual monthly call with experts^{4,5}

Premium Subscription

8 hours of support per month included¹

1-hour response time

Support requests via helpdesk and hotline in German and English³

15% discount on every additional support hour

Open Source – done right!

Open Elements sits on the board of the Eclipse Foundation and the Technical Advisory Board of the Linux Foundation. We actively contribute to critical OSS projects such as Eclipse Adoptium, Jakarta EE, Apache Maven, and other key projects.

We combine:

- ✔ Community proximity
- ✔ Sustainable OSS funding
- ✔ Regulatory know-how (CRA)
- ✔ Enterprise experience
- ✔ Transparency

Gerhart-Hauptmann-Str. 49B
51379 Leverkusen

¹ Unused support hours expire at the end of the month — in this case, your contribution directly supports the further development of the relevant open-source components.

² Business days are Monday through Friday, excluding public holidays in North Rhine-Westphalia (NRW) / Germany.

³ For our helpdesk, we use a GDPR-compliant solution hosted in the EU. Our customers receive individual accounts, and communication is available in both German and English.

⁴ Our experts are developers and technical staff who directly contribute to the respective OSS projects (e.g., as committers or maintainers).

⁵ We use Zoom for webinars and individual consultations.
